# MEMORANDUM

Alan Chappell called yesterday and said he was at the above business doing a waste audit and a Frank Watson indicated that they generate 4-5 gallons of a solvent-like material from cleaning a machine periodically. Alan said Mr. Watson indicated that he currently discharges this material down the sewer, but wants to do the right thing, Please make a site visit when convenient and advise them of our restrictions and their options for disposal.

6-7-96 10:00 A.M.

Karen Chandler & I met Mr. Frank Watson at Raised Letter Printing to see what is disposed off Down the sanitary sewer. We found that they have Silver Recovery Cartridges on their Film Developer. They have 4-5 gallons of water discharged when they cleaning their plate imprint machine. They only solvent that is used is with rags. They use very little ink. What waste ink they might have, Alan Chappell told them to use oil dry to Absorb it And place it in the dumpster.
