RECEIVED AUG - 7 1984 MAYOR'S OFFICE

Vol. XII
No. 39
(For immediate release)

writer: Kenny Seeney

JEFFERSON CITY, MO., Aug. 1, 1984 - The Department of Natural Resources announced today its final decision to issue a permit to the McKesson Chemical Co. to store hazardous waste at its Springfield facility.

The permit, required under Missouri law, will allow the company to construct and operate a storage area at the facility. The company plans to store waste solvents and isopropyl alcohol until the wastes can be shipped off-site for recovery.

A copy of the company's application, the final permit, the summary of public comment, and the Missouri Hazardous Waste Management Law and regulations, will be available for review after Aug. 6, 1984, at the Main Library, 397 E. Central, Springfield.

Citizens were invited to comment on the department's preliminary decision to issue the permit and were allowed to request that a public hearing be held on the proposed permit before the department made its final decision.

Both state law and hazardous waste management laws require companies that store, treat, or dispose of hazardous wastes to have permits and to operate their facilities in compliance with strict standards. The U.S. Environmental Protection Agency has completed its review of the McKesson Chemical Co. application and has issued a federal storage permit to coincide with the state permit.

The department has issued the company a 10-year permit that will expire in September 1994.

McKesson Chemical Company - Springfield
August 1, 1984
Summary of Comments

On May 29, 1984, the Department of Natural Resources announced a tentative decision to issue a hazardous waste storage permit to McKesson Chemical Co. There were no requests for a public hearing; however, there was one comment on the tentative decision.

The comment was made by the applicant. The comment pertained to a potentially misleading statement in the fact sheet that accompanied the tentative decision. The comment did not require any changes in the permit.

Recently, the Missouri Hazardous Waste Management Commission promulgated rules that became effective June 18, 1984. These rules have required some revisions to the tentative decision.

The permit will allow McKesson Chemical Company to construct and operate its Springfield storage facility for a term of ten (10) years. All operations shall be in compliance with the Missouri Hazardous Waste Management Law and Rules and the conditions with permit #OSO 090184 004.

Dear Landowner:

In accordance with 10 CSR 25-8.010(1)(B)2, the department is notifying you by press release that it has received a hazardous waste storage permit application from a facility adjoining your property.

McKesson Chemical Company, an existing distributor of solvents, has proposed building a warehouse adjoining your land and has submitted a storage facility application. The application is for existing on-site storage until shipments can be made to an approved facility for recovery of spent solvents.

If you have any questions, please contact me at this office.

Sincerely,

Joe Jansen

(For immediate release)

JEFFERSON CITY, NOV. 19, 1982 - The Department of Natural Resources has received applications from four St. Louis area firms and one Springfield company for permits to continue operating their hazardous waste storage facilities. The facilities are located "on-site" at plants and generally are used primarily for storage of wastes produced at those sites.

The five applications are the first permit applications for existing, "on-site" facilities to be reviewed by the Department of Natural Resources. Missouri has about 150 on-site treatment, storage, and disposal facilities. It is estimated that more than 70 percent of the hazardous wastes generated in the state are managed at these facilities.

The applications and copies of the Missouri hazardous waste law and regulations are available for review at public libraries near the facilities. Natural Resources invites public comment on these applications throughout its review process, which is not expected to conclude before mid-February. Correspondence concerning these applications should be mailed to the Missouri Department of Natural Resources, Waste Management Program, P.O. Box 1368, Jefferson City, MO 65102. The public will be notified when the department reaches preliminary decisions on the applications and will have an opportunity to request a public hearing on any proposed permit before the department makes its final decision.

grinding operations; degreasing operations; painting operations; and aircraft fueling and maintenance operations. Some wastes from other McDonnell Douglas-St. Louis plants are stored at the Hazelwood plant. Wastes are stored at the plant before shipment to approved reclamation, treatment, and disposal facilities. The McDonnell Douglas application is available for review at the Florissant Valley Branch of the St. Louis County Public Library, 195 S. Florissant Rd.

--Sigma Chemcial Co., a manufacturer and distributor of research biochemicals, has applied for a permit for a tank and drum storage facility at its 3500 DeKalb St. plant in south St. Louis. The company has one 5,400-gallon storage tank and space for up to 50 drums at the facility. The company stores spent solvents and waste mercury compounds generated at the plant before shipping them to approved reclamation, treatment, or disposal facilities. The Sigma application is available for review at the Carpenter Branch of the St. Louis Public Library, 3309 S. Grand.

--Ralston Purina Co. is seeking a permit for a storage facility located at the company's plant at 13001 St. Charles Rock Rd. in Bridgeton, where animal health products are produced. The company has one 16,000-gallon tank and space for up to 20 drums at the facility. Solvents and dry waste contaminated with pesticides are stored at the facility before shipment to approved treatment or disposal facilities. The Ralston Purina application is available for review at the Bridgeton Trails Branch of the St. Louis County Public Library, 3455 McKelvey, Bridgeton.

--McKesson Chemical Co., a distributor of industrial chemicals, has applied for a permit for a storage facility at 220 S. Barnes Ave. in Springfield. The company accepts spent solvents from its customers and stores them at the Springfield facility before shipping them to McKesson recycling plants in other parts of the country. There is space for up to 165 drums of waste solvents at the Springfield plant. The McKesson application is available for review at the Springfield Library, 397 E. Central.

Both state and federal hazardous waste management laws require companies that store, treat, or dispose of hazardous wastes to have permits and meet certain operating standards. When those regulations took effect, companies were given temporary authorization to continue operating their existing facilities until notified to submit permit applications. Because the companies must obtain storage permits under both state and federal regulations, the Department of Natural Resources and the U.S. Environmental Protection Agency will conduct joint reviews of applications.
