Mr. Terry Watts
ADM Alliance Nutrition Inc.
701 E. Chestnut
Springfield, MO 65802

RE: Industrial User Pretreatment Questionnaire

Dear Mr. Watts:

In reviewing our records it appears that we do not have an Industrial User Pretreatment Questionnaire on file for either of your facilities located at 701 E. Chestnut and 1300 W. Locust. The City requests its industrial users complete a Questionnaire in order to maintain accurate information on the types of industrial wastewater being discharged to the City's sanitary sewer.

I'm enclosing an Industrial User Pretreatment Questionnaire for each of your facilities for you to complete. Please complete these questionnaires and return them by July 31, 2006. My address is:

Gene Pabst
City of Springfield
1216 W. Nichols
Springfield, MO 65802

I am also enclosing a copy of Chapter 120, "Wastewater Regulations", of the Springfield City Code, for your information

If you have any questions, please feel free to call 864-1488.

Yours truly,

Gene Pabst

I checked on this on June 30, 2004 (2:55 P.M.) What is happening is ADM Alliance is replacing the line that serves their boiler. This line is old and has collapsed. They dug up the existing line and wanted to replace it. This line goes into the manhole on their property. After ADM talked with Sharon they have contacted Building Development Services and were told that they need a permit and they need a licensed plumber to do the work. I told them when the plumber replaces this line he will need to place on elbow on the line after it enters the manhole and extend a pipe down toward the floor of the manhole.

I talked to Don Kelley, Asst. Mgr. and Chuck McGinnis.

Gene

Boiler Blowdown goes through a reservoir before Discharging. Blow down Approximately 50 gallons at a time.

CITY OF SPRINGFIELD
INTER-OFFICE MEMORANDUM

ATTENTION OF FILE DATE November 4, 1982

DEPARTMENT

On October 20, 1982, Bob Corson and I met with Gordon Langston, the manager of Central Soya, 1300 W. Locust, to discuss the disposal of 600 lbs. of molasses to the sewer. We took a sample of the molasses at this time (See results on attached sampling sheet). On November 4, 1982, I called Gordon Langston, to tell him the cost of disposing of the molasses and suggested it would be cheaper to pump it into barrels, solidify it, and dispose of it at the landfill. He said that he had had two offers from farmers to take it.

CITY of SPRINGFIELD

September 28, 1990

Central Soya Feed Company, Inc.
1300 West Locust
Springfield, Missouri 65803

Dear Sirs:

This letter will confirm our conversation on this date concerning the disposal of 500 gallons of molasses at the Springfield Wastewater Treatment Plants. Due to the high biochemical oxygen demand of molasses waste products we are unable to accept this waste for disposal at this time.

While this service is normally available, the Southwest Wastewater Plant has experienced unexplained upset conditions that have reduced its capability to treat the current loading. The plant discharges to Wilson Creek by the authority and limitations of a permit issued by the State of Missouri. Any additional loading could lead to a violation of the permit, increase the duration of a violation, or further reduce the capability of existing treatment processes. The above situations could result in substantial penalties to the City of Springfield, and or cause a loss of aquatic life in the receiving stream.

It is anticipated the Southwest Wastewater Plant will be available for treatment of high strength wastes in January, 1991. We regret this inconvenience to Central Soya, but this service must be declined for the reasons stated above.

If you have any questions please feel free to contact this office at 864-1924.

Yours truly,

Stephen Short
