To: Maranatha Manor File
From: Karen Chandler
Subject: Diesel Storage Tank
Date: January 29, 1996

This morning Randy Lyman got a call from the NWTP about a slug of diesel fuel that came into the plant Friday evening, January 26. Gene Pabst and I went to Maranatha Manor at 233 E. Norton to ask them about this because of the slug of diesel we got from them once before. We talked to Mr. Don Hayes about this. He said they had gotten rid of the underground tank and their new above ground storage tank was there but it wasn't in use yet because the plumbing on it wasn't done. They also have a 250 gallon AST which holds diesel fuel. He told us that this tank only had about 70 gallons in it at this time.

MEMO TO FILE
RE: Maranatha Manor, 233 E. Norton

On Friday, February 17, 1995 the NWTP had a slug of diesel fuel come into the plant between 2 p.m. and 6 p.m. Charlie Parrot said the odor permeated the plant all weekend and there was a sheen on the final clarifiers. He said it affected the D.O. at the plant, but there was also a discharge from Reckitt & Colman that came in the plant that might also have affected the D.O. On Tuesday, February 21, 1995 morning I went to Maranatha Manor to see if they had any deliveries of diesel fuel on Friday. I talked to Mr. Don Hayes and he said they hadn't had any deliveries of diesel fuel on Friday and that the underground storage tank had been removed. He told me they were going to put in an above ground storage tank.
