### PURPOSE FOR CALL

He asked if he had some electro polishing waste what should he do with it. He asked if he could just neutralize it with baking soda. I asked several questions and found that he is located at 900 South Scenic and his phone # is 831-5232 and the name of his business is Gold Dental Lab. He indicates he has approximately one quart of electro polishing waste and had gotten my name from David Gasaway (Naremco).

I explained to him that I would talk with my supervisor and get in touch with him this afternoon.

6-27-94: I called and informed him that he could neutralize the waste with baking soda (he indicated it was a dilute sulfuric acid solution), then treat with equal parts of bleach to destroy any cyanide that may be present. Then it should be safe to put in the sanitary sewer.
