Rebated Price = \$90

For more information about the barrels, visit www.jamesriverbasin.com or call 836-6183.

Rain Barrel FAQs

- Why use a rain barrel?** A roof size of 1,000 sq. ft. will generate approximately 600 gallons of water from a 1-inch rainfall. Collecting and using this water conserves public and private water supplies, and reduces pollution, flooding, and erosion in local waterways by reducing storm water runoff.
- How do I use the water collected in the barrel?** Fill your watering can or use a regular hose or soaker hose to water indoor and outdoor potted plants and landscaped areas, clean off gardening tools, wash your car, and for other non-potable uses.
- Will the barrel be a source of mosquitoes?** A mosquito dunk can be placed in the barrel to prevent mosquitoes from breeding. These products are non-toxic, inexpensive, and widely-available at local lawn & garden centers.
